

LQABR (dev) — IAM Identities, Roles & Relations

Project lqfingsrv-dev · who does what · who gets which role

1 · SETUP — done once by the admin

2 · DEPLOY & RUNTIME — uses what was granted; grants nothing new

Who does what

swaroop@ enables APIs + grants ALL roles (setup, once). **aidcld@** only deploys — it cannot enable APIs or edit IAM.

lqabr-agent-dev is what the service runs as. Deploy assigns this SA — it does NOT append any policy to it.

Link between aidcld@ and the SA = actAs (impersonate at deploy) only. No membership, no shared roles.
